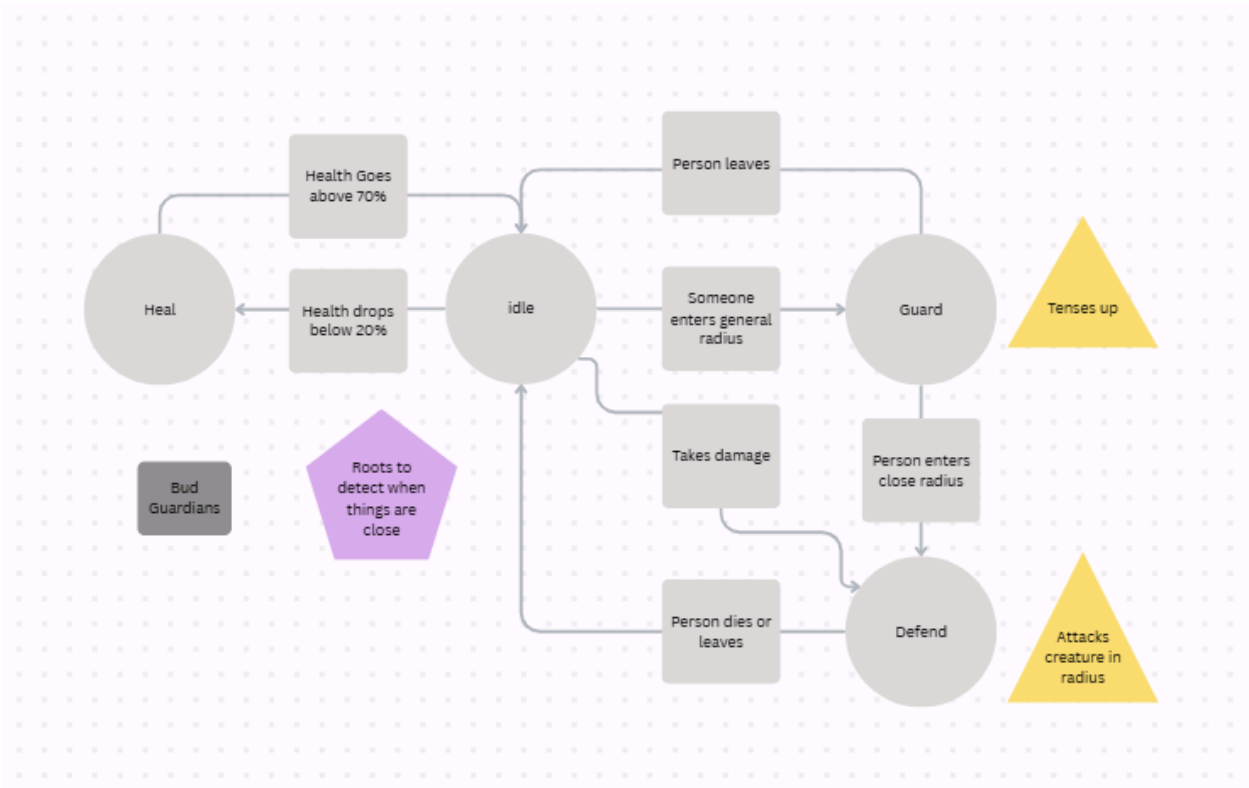
Controls, wasd to move, e to attack.

Video link: https://youtu.be/DI1Cvh7KH7g



States:

Idle: bud guardian waits around doing nothing.

Guard: Idle guardian gives a visual indicator that they are on guard

Defend: idle guardian will chase and attack whatevers in its radius

Heal: idle guardian runs from the threat and heals;

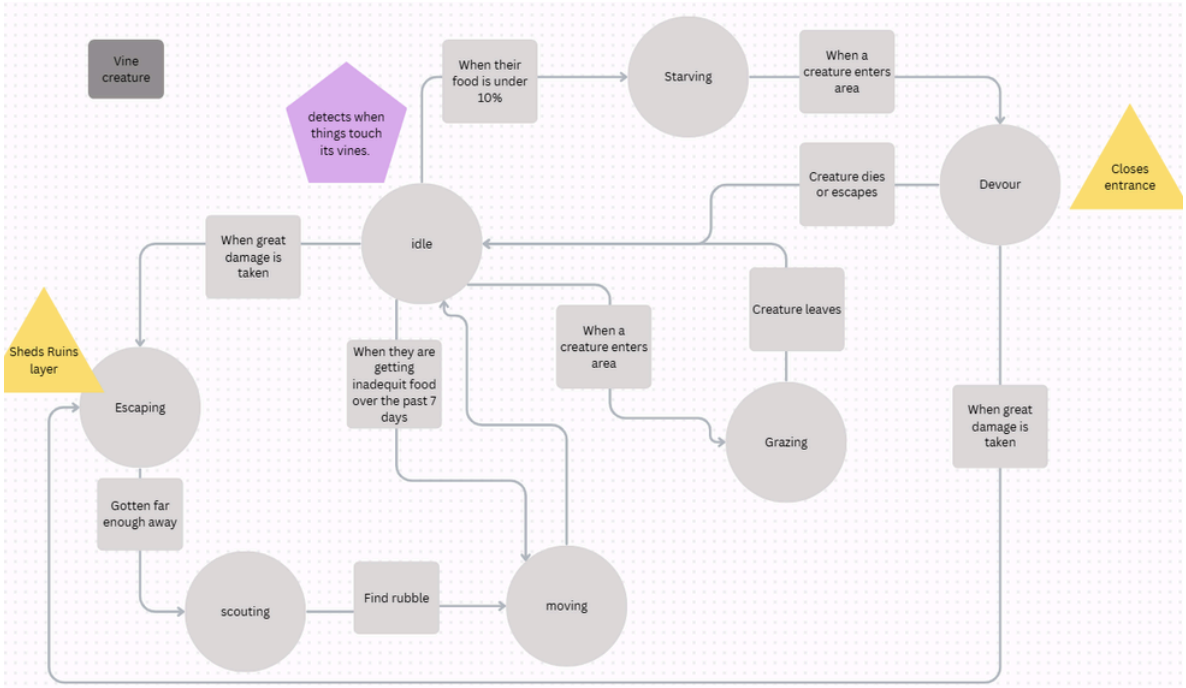
Idle transitions:
Idle transitions to guard when player is within 5 units of it.
Idle transitions to heal when health is below 20%.

Guard transitions:
Guard transitions to idle when player is over 7 units away.
Guard transitions to defend when player is withing 2 units of it.

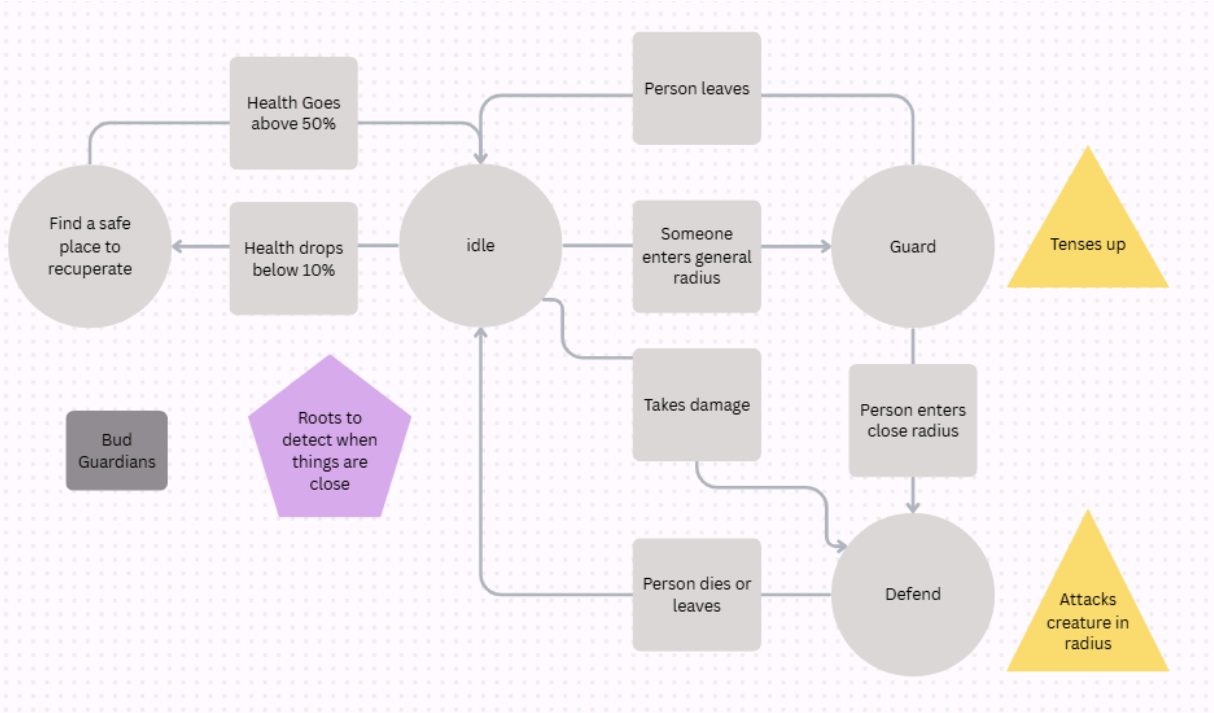
Defend transitions:
Defend transitions to idle when the player is 7 or more units away.

Challenges faced, no sleep, very tired so much work.

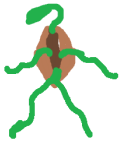
I didn’t have time to understand the more nuanced features of the navmesh and I feel my AI suffered for it.



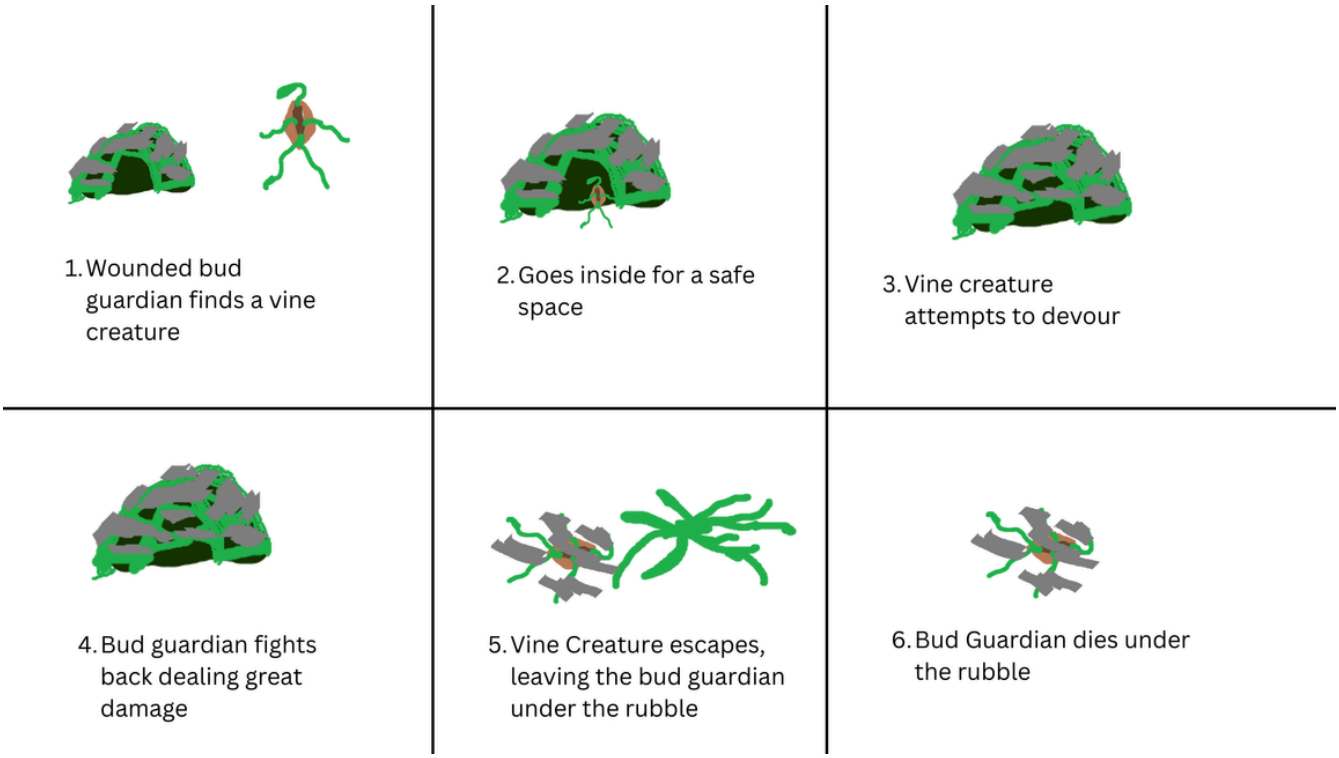
Vine creature
detects when things touch its vines.
When their food is under 10%
Starving
When a creature enters area
Creature dies or escapes
Devour
Closes entrance
When great damage is taken
idle
Creature leaves
Sheds Ruins layer
When a creature enters area
When they are getting inadequit food over the past 7 days
Escaping
Grazing
When great damage is taken
Gotten far enough away
scouting
Find rubble
moving



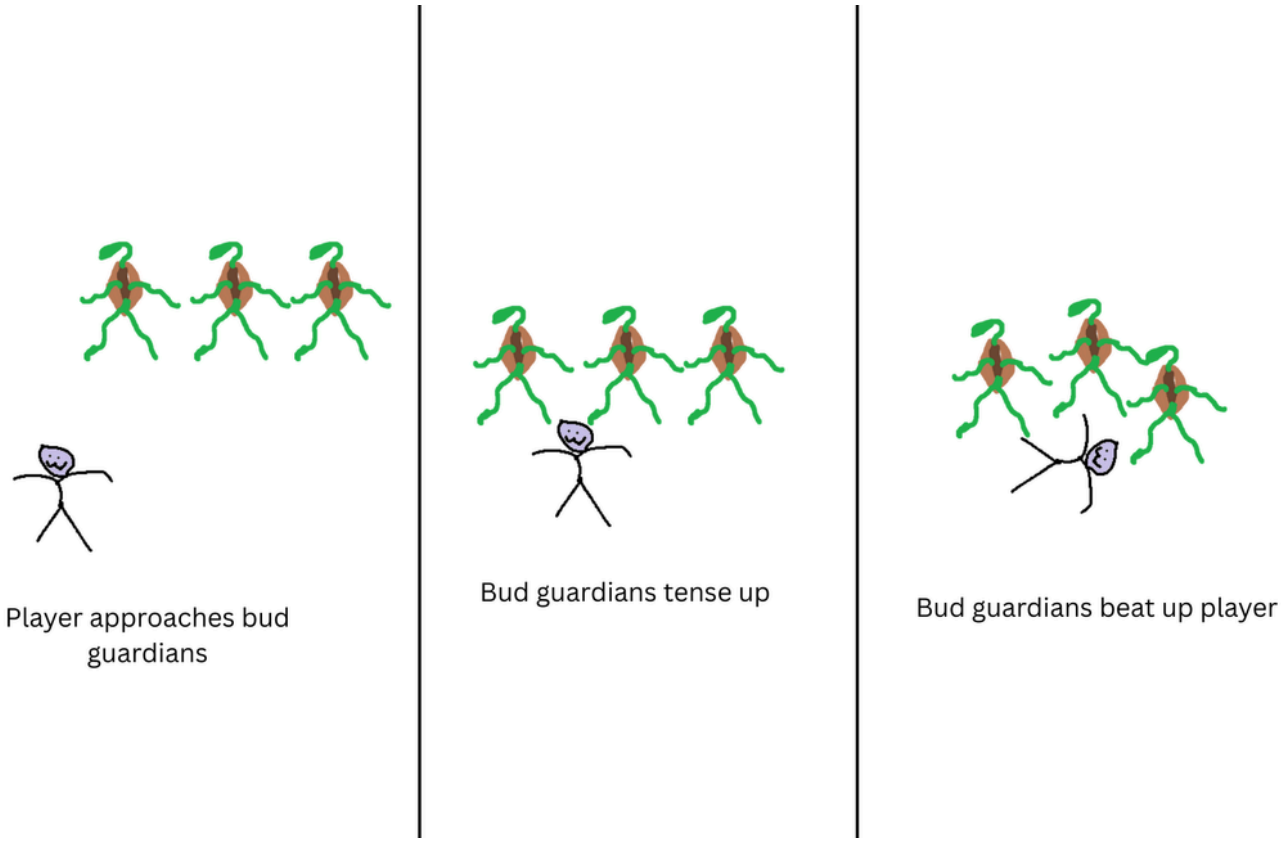
Health Goes above 50%
Person leaves
Find a safe place to recuperate
Health drops below 10%
idle
Someone enters general radius
Guard
Tenses up
Takes damage
Person enters close radius
Bud Guardians
Roots to detect when things are close
Person dies or leaves
Defend
Attacks creature in radius



game scenario 1:



game scenario 2:



For the bud guardians:

I designed them with the understanding they are very simple in this world, they are born in the garden, and grow up to defend it.

I designed this ai to be very simple but work well in groups, their goal overall is to stop people from entering their garden

They are hostile to anyone who enters their radius.

Their feedback is them tensing up when the player gets within their range and attacking when they get closer

For vine creatures:

The vine creatures are made of vine and use building rubble for cover.
To feed they will allow creatures to use them as shelter and in return they take some nutrients from the creatures, if they are wounded they will drop the ruins they are using for defense,

The states for this ai are designed to be this creature's survival habits, it is made to be something that this creature would do in the wild to survive.

It is a pretty stationary creature since it is holding up rubble, so it feeds with symbiotic/transactional relationships with other creatures. Who will use it for shelter and it will feed off of them.

If it is starving though it will instead devour a creature that enters and decompose it, betraying that creature's trust.

If it gets damaged enough it will shed its shell to improve movement, while sacrificing defence and fleeing to search for a new area and more rubble.

Finally if it isn't getting enough food over the past 7 days it will move to find an area where it can better feed.

Vine creature to bud guardians:
This is meant to be a sorta symbiotic relationship where when the bud guardians get low on health, if there's a vine creature nearby they can go to it for shelter while they recuperate. Letting the vine creatures feed off of them a little bit. This is good for both parties. If the vine creature is starving however they can eat the bud guardians with no consequence.

Vine creature to player:
The player can take shelter with the vine creature through the night with the downside of the fact they will take 5% of their health.
There is also the risk that they will attempt to devour the player which makes the player have to fight with them.

Bud people to the player:
If the player gets too close they will be attacked by the bud guardians in the immediate radius, if the player defeats them they get access to their garden though.

Feedback states:

Bud guardian:
Tensing up is to signify to the player that if they get closer they will be in danger.

Vine creature:
Shedding off the rubble will show that they are in a way changing forms / how they act.

Closing the entrance will signify to the player that they are in danger.
